INDIGO GARMENTS WORKSHOP – *Ajman, UAE*

08/2009 to 10/2012 **Assistant Manager (Garment Wet Processing Department)**
Crescent Bahuman Limited - *Pindi Bhattian*

Skill Highlights

- Develop and execute the company's operational strategy to directly support profitability ensuring alignment with the CEO's financial vision.
- Oversee all daily operations of the manufacturing plant, including production, supply chain, quality control, and maintenance, with a constant focus on cost-efficiency.

- Translate the company's strategic goals into operational and financial targets, creating a clear roadmap for the entire operations team.
- Optimize manufacturing processes to maximize efficiency, output, and on-time delivery, for example, by increasing overall production capacity by 18% within one fiscal year without significant capital expenditure.
- Implement and monitor comprehensive Key Performance Indicators (KPIs) for production and financial performance, such as Cost Per Minute (CPM), Overall Equipment Effectiveness (OEE), and contribution margin per product line.
- Drive continuous improvement initiatives like Lean Manufacturing to reduce waste and lower production costs, potentially reducing manufacturing waste by 15% and cutting production costs by 8% annually.
- Manage vendor and supplier relationships to ensure quality, cost-effectiveness, and reliable delivery, which can lead to an improvement in on-time fabric delivery from suppliers to 95%.
- Optimize inventory levels through advanced planning to balance cost with production needs, aiming to reduce excess inventory holding costs by 20% and increase inventory turnover ratio by 2 points.
- Establish and enforce stringent quality control standards across all stages of manufacturing, directly linking quality performance to cost of rework and warranty claims.
- Ensure final denim garments meet customer specifications and quality expectations, successfully lowering the customer return rate due to defects from 4% to 1.5%, directly protecting revenue and brand reputation.
- Develop, manage, and be accountable for the entire operational budget (OpEx and CapEx), ensuring all departments operate within financial constraints.
- Conduct rigorous cost-benefit analyses for all major operational investments, such as new machinery or automation technology, to ensure a strong Return on Investment (ROI).
- Analyze the profitability of different product lines, customer accounts, and manufacturing techniques to guide strategic

decisions on pricing and resource allocation.

- Oversee maintenance and strategic investment in manufacturing machinery and plant infrastructure, justifying CapEx by projecting a 15% productivity gain post-implementation.
- Drive the adoption of relevant technology, such as implementing a new ERP system to improve production planning accuracy by 25% and provide real-time financial data.
- Lead, mentor, and develop the operations management team, instilling a culture of financial acumen and ownership of departmental P&Ls.
- Foster a culture of accountability and high performance, reducing employee turnover in key production roles by 30%, which directly reduces recruitment and training costs.
- Integrate sustainable practices into manufacturing, such as reducing water consumption in the denim washing process by 40%, leading to significant utility cost savings and enhancing brand value. .

Education

01/2009 **Bachelors**: **Textile Engineering (Wet Processing)**

Baha Uddin Zakariya University - *Multan*

Skills

- Process optimization
- Production planning
- Troubleshooting
- Change facilitation
- Efficiency improvement
- Scheduling
- Problem-solving
- MS Office
